User Story 1

- As a student

  I want to login

  So, I can easily enroll

Scenario

1: A student logs into their account and navigates to the course selection page. They can view all available courses and filter them by subject, level, and other criteria.

2: A student searches for a specific course by name. The search results will display all courses matching the search query. The student is then able to view detailed course information and select the one they want to enroll in.

3: The student views all the courses they are currently enrolled in and can view the course details, including the course syllabus and any associated materials.

- As a Registrar Faculty

  I want to send notifications

  So, students can be notified regarding registration deadlines.

Scenario

1: The Registrar Faculty can send notifications to all students via email, or other communication platforms.

2: The Registrar Faculty can customize notifications to specific student groups or individual students. S

3: The Registrar Faculty can view sent notifications and track their success rate. Scenario 4: The Registrar Faculty can set up notifications to be sent at specific times and on specific dates.

- As an admin

  I want to check the database

  So, I can update and retrieve course and student information.

Scenario

1: The admin logs into the system and checks the list of courses and student information in the database.

2: The admin updates the courses in the database by entering new information and making changes to existing information.

3: The admin retrieves course and student information from the database for reporting or other purposes.
